

– Volcanoes kill trees – Save your trees from volcanoes

Mulches are materials placed over the soil surface to maintain moisture and improve soil conditions. Mulching is one of the most beneficial things a home owner can do for the health of a tree. Mulch can reduce water loss from the soil, minimize weed competition, and improve soil structure. Properly applied mulch can give landscapes a handsome, well-groomed appearance.

MULCH MUST BE APPLIED PROPERLY; if it is too deep or if the wrong material is used, it can actually cause significant harm to trees and other landscape plants.

"Mulch volcanoes" cause many problems for trees.

Mulch wide – not deep.
