

Clean Water

By Caroline Apprecht

Water is something we all use,
Water is something we don't want to lose,
For all of us, it's something we drink,
We don't want bad water to come out of our sink.

When you take a shower, don't use full power,
Make it short and don't take long.
When you brush your teeth, don't keep the water on,
turn it off, save it, and it won't be gone.

You might not think to help, you can ride your bike,
But this is something the Environment would like.
Riding your bike causes much less pollution,
Walking is also a good solution.

These pollutants can get into our streams,
And the effects are much worse than it seems.
So I hope that you can help keep our water clean,
and this will help the streams & lakes be in a pretty scene.
